**SOLUTIONS  
PHYSICS**

1. (D)

$$2F - f_r = ma_{cm} \quad - (1)$$

$$FR + f_r = \frac{1}{2} mR^2 \alpha \quad - (2)$$

$$a_{cm} = R\alpha \quad (3)$$

on solving equation (1), (2) and (3) we get  $f_r = 0$

2. (A)

$$T_1 - \frac{M}{2}g = \frac{M}{2}g$$

$$T_1 = Mg \quad - (1)$$

$$T_2 - Mg = Mg$$

$$T_2 = 2Mg \quad - (2)$$

$$F - (T_1 + T_2) = 3Mg$$

$$F = 6Mg$$

3. (C)

In both case time period of oscillation should be same

On displacing the block by  $x$  then  $F_{rest}$  in both case should be same

$$2 \times K(2x) = \frac{2K_1}{5}x$$

$$K_1 = 10$$

$$\frac{1}{K_{eq}} = \frac{1}{K_1} + \frac{1}{2K_1} + \frac{1}{K_1}$$

$$K_{eq} = \frac{2K_1}{5}$$

4. (B)

$$x_{max} = 2 \left( \frac{m_1 \times F_2 + m_2 \times F_1}{K(m_1 + m_2)} \right)$$

$$x_{max} = 2 \left[ \frac{F(2m) + 2F(m)}{K(2m + m)} \right] = \frac{8F}{3K}$$

5. (D)

$$F_{net} = \sqrt{N^2 + f_{smax}^2} = 0.5N$$

$$N = mg = 0.4N$$

$$f_{smax} = \mu N = 0.3N$$

$$f_{smax} = ma_{net}$$

$$\mu_s mg = m \sqrt{(r\alpha)^2 + (\omega^2 r)^2}$$
